<ABOUT ME>

I am 31 years old, I am from Mendoza, Argentina, I consider myself an active person and always looking to overcome challenges both in life and in the world of programming. I have experience working in development teams, in which I always seek to learn new knowledge from my colleagues and at the same time teach what I have incorporated throughout my experience in the IT world.

<PROJECTS>

FoodApp - FullStack Developer

The project is a spa(single page application). On this page you can see various types of food, you can filter types of diets, sort in ascending or descending order according to the name of the recipe, or according to the level of health score, in addition to being able to search by recipe and create the one the user wants with a controlled form.

The technologies used in the project were pure CSS, React.js, Redux, Node.js, Express, PostgreSQL and Sequelize.

Github: https://github.com/Lucas0894/FoodApp.git

Reparo.io - Front-end Developer

Our project at the SoyHenry Institute consisted of developing a web application that facilitates the application and search for specialized technicians in the construction industry. The app allows users to register their profiles, find job opportunities, and companies to post job postings, thus promoting an efficient connection between technicians and employers in the sector.
